

BRING YOUR event to life

The Kudos – Hamilton Science Excellence Awards

Client Brief:

The Kudos Hamilton Science Excellence Awards recognise scientists based in the Waikato region for their ground breaking research and world leading discoveries. Being able to tell these stories to inspire a general audience takes time and skill, and the success of the Kudos Awards relies heavily on the ability to flawlessly present these stories.

Vidcom Solution:

It was important for Kudos to change up the look of the event in 2015. A modern theme was designed and embraced for this year's event.

This was achieved with Vidcom focussing on highlighting the stage area and making this the focal point for the evening. The concept of the pillars, as seen in the above photo, was developed and created in our warehouse and then executed on stage. The pillars continuously changed colour and helped to add depth and dynamic movement to the stage.

Vidcom also incorporated a mixture of LED lights, moving heads, and a gobo stencil lighting wash to complement the theme across the room.

The stories and awards were presented by two 6k projectors, and seamlessly controlled using a Roland V1600HD video mixer. These were displayed on two large 16 x 9 ft screens.

The audio consisted of 6 high-quality JBL speakers suspended in the roof and was controlled through a Soundcraft Digital Si audio desk.

Client Feedback:

"It was great working with Charlie, he is very hands on, and open to looking for solutions to suit our event and budget. The lighting and sound this year was brilliant, a step up from previous years which is always important with annual events. Thanks Charlie and team!"

Soteria Ieremia – Project Manager
